EXPERIENCE

OmniTrust (Formerly INTEGRITY Security Services)

Boston, MA

Full-Stack Software Engineer

January 2024 – December 2025

- Architected AWS-based full-stack web applications (Node.js, React) that support the certificate provisioning and lifecycle management for 100K+ IEEE 1609.2 certificates
- Engineered cross-platform mobile apps (Kotlin, Swift) enabling real-time V2X interoperability for 50+ devices at 500+ messages/second for construction zone hazard detection and worker safety alerts
- Built ECDH cryptographic signing libraries (Kotlin, Swift) for tamper-proof V2X message authentication
- Optimized system observability by migrating 32M+ logs to DocumentDB, reducing infra costs by ~45%
- Containerized EV2G app and automated CI/CD via Jenkins pipelines, eliminating manual build, test, and release steps
- Developed Flask microservice for traffic intersection validation, eliminating reliance on an inconsistent external tool
- Consolidated three repos into a monorepo, enabling 14 end-to-end tests across all services for the first time

Wolters Kluwer - UpToDate

Waltham, MA

Product Full-Stack Software Engineer

January 2023 – December 2023

- Led modernization initiatives (Java, Spring Boot, Vue.js), resolving critical security vulnerabilities and eliminating technical debt for a platform serving 3M+ health professionals
- Automated environment validation for 150+ developers, reducing setup failures and onboarding friction
- Consolidated fragmented JSP error pages into unified front-end error-handling architecture, improving maintainability

NURover

Boston, MA

Software Developer | Webmaster

September 2021 – May 2025

- Developed haptic control interface in C++ as proof-of-concept for teleoperated 4-DOF robotic arm manipulation
- Implemented Python ROS state machine for autonomous navigation with Zed2 camera and IMU/GPS sensor fusion

PROJECTS

Foresight-ML: Financial Distress Forecasting

January 2026 – May 2026

- Won 1st place at Northeastern × Google MLOps Expo 2026 for a 6–12 month financial distress forecasting platform
- Orchestrated end-to-end ML pipelines via scheduled Airflow DAGs (ingestion, preprocessing, retraining) with Cloud Monitoring alerts for data drift and Cloud Run failures, ensuring model accuracy at 0.977 ROC-AUC
- Provisioned GCP infra via Terraform (Cloud Run, Cloud SQL, GCS, IAM, Secret Manager), deploying MLflow on Cloud Run with serverless auto-scaling to eliminate managed platform costs

Large-Scale Misinformation Classification

September 2025 – December 2025

- Trained deep learning models (CNN, LSTM, FNN, Longformer) for misinformation detection across 3.4M articles, achieving 99.6% accuracy with Longformer outperforming baseline SVM/XGBoost by 12%

Cheffy: AI Cooking Assistant

September 2025 – December 2025

- Developed a multi-agent cooking assistant (Gemini, RAG) with 3 external tools and iterative output grading agent

Finance Tracker AI Chatbot

June 2025 – Present

- Created a LangChain RAG chatbot for natural-language transaction analysis and budget insights

EDUCATION

Northeastern University - Khoury College of Computer Sciences

Boston, MA

M.S. in Computer Science | GPA: 4.0/4.0

B.S. in Computer Science and Business Administration | GPA: 3.966/4.0

Key Coursework: Artificial Intelligence, Machine Learning, Software Engineering, ML Operations, Cybersecurity, Networks, Database Management, Systems, Algorithms & Data, Object-Oriented Design, Data Science

TECHNICAL SKILLS

- **Languages:** JavaScript/TypeScript, Java, Python, Kotlin, Swift, Go, SQL, C++
- **Frameworks:** React, Node.js, Vue, Spring Boot, Flask
- **AI/ML Tools:** PyTorch, TensorFlow, Scikit-Learn, LangChain, Ollama, MLflow
- **Developer Tools:** AWS, GCP, Docker, Jenkins, Git, Jira, MongoDB, Terraform, Airflow
